

# Sure-Cut - Accessories

## Sure-Cut 2

Sure-Cut 2 is a quality, precision mitre cutting, hand tool - a perfect companion for the Sure-Cut 3 bench mounted double mitre cutter.

Robust all-metal construction and versatile design offer the following special features:

- Unique parallel action handles for a perfect mitre with minimum effort
- Special 75 degree included angle mitre for additional clearance in the corner where board bruising may occur (\*see detail below)
- Mitre cut is registered by a pair of centrally locating guides that the locator slides into, ensuring a cut central to the channel, even when cutting off-centre matrix
- Replaceable cutting anvil, manufactured from non-ferrous alloy for longer blade life and features a self levelling design for greater accuracy.
- Fully supported for all spare parts

## Sure-Cut Press Knife

To assist in the ease of use, both on initial installation of the creasing matrix and the subsequent removal at the end of the run, we have developed the purpose built hand tool - "Sure-Cut Press Knife" - to replace the often used craft knife or wood chisel.

The press knife, unlike the wood chisel, has been designed to have the weight of the tool balanced by the handle and the blade is thus perfectly weighted, offering excellent dexterity in removing the double sided adhesive backing paper prior to running the transfer impression.

The specially ground double angle blade has a feather edge to slip easily under both the matrix and the adhesive layer of the matrix, allowing it to be lifted cleanly away from the platen.

The press knife is manufactured from quality materials and is plated/anodised to prevent corrosion, whilst the blade is fashioned from tool steel.
