

Sure-Clean & Sure-Slip - Technical Information

Sure-Clean

Sure-Clean has been universally acclaimed as the performance leader in the field of safe, high powered platen cleaning fluids.

Sure-Clean is a true cold cleaning solvent.

Sure-Clean has the following key advantages:

- Low flammability
- Low toxicity
- High solvency power
- Fast evaporation index
- Outperforms all types of citrus and aqueous based cleaning solutions

Sure-Clean does not contain contents that are known to damage the ozone layer and has a relatively high Occupational Exposure Limit, meaning its use can create a safer working environment.

For maximum efficiency, Sure-Clean is recommended to be spray applied then wiped clean with a lint free cloth.

Sure-Clean is available in the following options:

- 5 litre Pack
- 10 litre Pack
- 25 litre Drum
- 206 litre Drum

Full technical and safety information is available on our website, for downloading, or by post on request, and is supplied with all items.

Sure-Slip

Sure-Slip is a high performance silicone lubricant contained in an aerosol spray that offers a considerable reduction in friction, when applied to a multitude of surfaces.

By the use of modern technology materials, the overall effect of the lubricant is substantially increased both in the short and the long term.

Examples of some of the uses for Sure-Slip are as follows:

- Used with Sure-Clean to ensure long term platen/forme care by stopping rust and tarnish build up on cutting/creasing rules.
- A sparse application to the cutting forme prior to using creasing matrix allows an easier fit of the locator to the creasing rule and a positive registration on transfer impression.
- Ejection rubber performance can be improved by an application of Sure-Slip.

Wherever a reduction in friction is required, Sure-Slip is the answer.
